

Subject: Arby's Specific Evolution Elite Auto Drain Control Kit
Date: 08/27/21
Region: Global
Models Affected: Evolution Elite Electric and Gas, EEE 14x and EEG 24x

Summary

There are now two Evolution Elite control kits for service of fryers with automatic drains, one specific for Arby's and one for all other customers:

- **140748** – This is a new control kit specific for **Arby's** Evolution Elite fryers with **automatic drains**. *This control includes the RS485 radio connection to connect the Arby's SiteSage radio and comes pre-loaded with Arby's software.*
- **140402** – This is an existing control kit for all other customers using Evolution Elite fryers with **automatic drains**. *This control does not include the RS485 radio connection and requires customer specific software to be flashed onsite. Radio connection location on control marked below with a red circle.*

NOTE: Since it is only used on Arby's fryers and there is a global electronic parts shortage, the RS485 radio connection was removed from the 140402 general market control. The RS485 radio circuit / connection was left in place on the new 140748 Arby's specific control for connection of their SiteSage radio. If you have older 140402 controls in stock with the RS485 radio connector, these can be used to service Arby's Evolution Elite fryers with automatic drains.
