Subject: Control Software and Set Points for Evolution Elite (EE) and F5 Units
Date: 11/07/2023
Region: USA and Canada
Model Effected: Evolution Elite (EE) and F5 Units

As a reminder to all distributors,

Henny Penny (HP) provides the most current control software and set points for Evolution Elite (EE) and F5 model fryer installation startups. Rather than manually setting each menu item, download the latest software and set points from the extranet, and then install into the control using a USB drive.

IMPORTANT: Updating the control with the latest version control software is an HP requirement for startup.

The general rule is:
- For General Market (GM) customers, meaning non-franchise, check the extranet for the most current versions of software and set points for Evolution Elite (EE) and F5 units, before traveling to the customer location.
- In certain cases, the set points and software may be pre-programmed into the control as it leaves the factory or it will be on a USB stick, attached to the back of the controls, to upload upon start-up.
